

MICHHR

The Michigan Institute for Clinical & Health Research (MICHHR) at the University of Michigan is identifying and removing roadblocks in the translational research pipeline with the intent of extending life and reducing the impact of illness and disability. MICHHR is also carrying out research to ensure that offerings are evidence—and user—informed and ultimately scalable to other institutions. MICHHR’s goal is for health solutions to reach all people more quickly.

BRISP

The Behavioral Research and Innovation Support Program (BRISP) is housed under the Michigan Institute for Clinical & Health Research (MICHHR) at the University of Michigan and is part of the National Institutes of Health (NIH) National Center for Advancing Translational Sciences (NCATS) Clinical and Translational Science Award (CTSA) Program (UM1TR004404).

About this Collection of Resources

- BRISP conducted a survey (N=80) and focus group (N=6) to learn more about the data collection and management challenges faced by research professionals in academic or university settings and medical centers. As part of the data collection, respondents recommended specific resources and described how they were used. Our findings indicate that there is a need for a range of resources, from in-depth training options to quick reference sources. Therefore, this collection looks to support multiple audiences, from the newly initiated to the expert.
- This resource has been developed with a “less is more” approach. Rather than creating an exhaustive list of websites, trainings, and guides, Data Collection and Management is a curated list of top-notch, critical, and “source of truth” resources that is a valuable resource for research professionals of all skill levels.
- Your organization may have experts or resources that you can leverage to answer questions, prepare/revise data management or collection plans, and to review your processes. Reach out to librarians, information scientists, researchers on other teams, and review your organization’s websites, etc. for additional help.

Further Recommendations

- Reach out to librarians, information scientists, researchers on other teams, and review your organization's websites, etc. for additional help. Your organization/ institution may have experts or resources that you can leverage to answer questions, prepare/revise data management or collection plans, and to review your processes.
- Your organization/institution may have collaboration tools that can be leveraged to share data, code, and resources within your teams or with your external collaborators. GitHub, Dropbox/Box, Slack, Microsoft Teams or Google Suite can often be leveraged using your organization/institution credentials. Be mindful, however, about the sensitivity of your data, and ensure that the use of these tools is appropriate based on the security protocols.
- As regulatory and digital environments continue to evolve, the need to train, re-train, and develop new skills never ceases! Use the resources here to help create professional development plans for yourself and your team.
- If you know of an important resource, one that you frequently consult and find value in that is not listed here, please reach out to the  [BRISP team](#).

Data Collection & Management Resources

V 1.0 5/22/2025

Training / Resource Link / Source	Description	What we loved about this tool	Learning Level / Media Type / What you should know before diving in	
Best Practices for Clinical Research Data Entry in Excel & Spreadsheets ➔ R Consortium, Inc. (2021)	This recorded webinar covers best practices for using medical data in spreadsheets.	Solid resource on best practices for using Excel to enter, sort, and analyze data	- Level: Intermediate - Delivery Mode: Video - Viewers do not have easy access to the materials to do the real-time exercises	
Data Management Basics and Best Practices ➔ University of Kentucky Libraries (2017)	This librarian led video reviews the DMPTool , a free tool that helps researchers create data management plans. The video also provides introduction to basics of trending buzzwords like: Big data, data management, and data life cycle.	- Divided into sections – learners can skip to desired sections to target learning - Identifies personal opportunities for improving how you work with your own data.	- Level: Intermediate - Delivery Mode: Self-paced video - University-of-Kentucky-specific information may not be relevant to viewers from other institutions - No in-depth explanation on how the DMPTool works	
Data Management Expert Guide (DMEG) ➔ Consortium of European Social Science Data Archives (CESSDA) (2022)	This guide designed by European experts helps social science researchers make their research data Findable, Accessible, Interoperable and Reusable (FAIR). The guide takes you through the research life cycle providing guidance on how to organize, document, process, store, protect, share and publish your data.	- Pre-quiz suggests useful chapters to focus your learning - There's a game version of this material! Playing through it feels like an old school video game; a unique way of learning this material for those who don't want to just read pages. - Clearly organized and easy to follow	- Level: Beginner - Delivery Mode: Self-paced; review of web pages, PDFs, or interactive game - Developed for a European audience - Good for researchers collaborating with scientists in European countries to learn their data management standards	
Data Tree ➔ Institute for Environmental Analytics (No Date)	This course includes eight structured modules video, quizzes and real-life examples of data management, along with valuable tips from experts in data management, data sharing with business, policymakers, media, and the wider public.	- Glossary of terms provided - Easy to navigate modules	- Level: Intermediate - Delivery Mode: Self-paced training modules - Tool touches on other topics like data application, not just data management - Tool is free but requires you to make an account to access the full modules - Made with a specific audience in mind (those working with Natural Environment Research Council (NERC) in the UK), so not all the information may be relevant	
Digital Humanities Managing Data ➔ University of California at Los Angeles (UCLA)(2024)	This library guide provides a brief overview on how to handle data from humanities projects.	- Easy to navigate through each tab - Humanities focused	- Level: Beginner - Delivery Mode: Self-paced; review of tabs - Very simple - ChatGPT was used to write part of the training	
ELIXIR Research Data Management Kit (RDMkit) ➔ ELIXIR (2023–24)	This toolkit is designed to guide life scientists in their efforts to better manage their research data following the FAIR (Findability, Accessibility, Interoperability and Reusability of data) Principles.	- Keyword search feature - Includes information on several types of data, including health, human, plant sciences, and toxicology - Clear website design	- Level: Intermediate - Delivery Mode: Self-paced; review of tabs	
Introduction to Data Management for Undergraduate Students: Data Management Overview ➔ University of Illinois (2022)	This library guide provides data management basics for people new to research and the data collecting process.	- Information was presented clearly and simply - Examples provided	- Level: Beginner - Delivery Mode: Self-paced; review of library guide - Designed for undergraduate students at University of Illinois may not be widely-applicable	
LEARN Toolkit of Best Practices for Research Data Management ➔ The LEARN Project (2017)	This toolkit provides examples of best practices for research data management from institutions around the world.	- Sections of toolkit can be downloaded separately - Case studies help visualize data management in action	- Level: Expert - Delivery Mode: Self-paced; review of "toolkit" (PDF document with several sections) - Not a how-to guide - Discusses examples of data management	
Manage, Improve and Open up your Research and Data ➔ PARTHENOS (2023)	Training modules focus on emerging trends and best practices in digital humanities and research infrastructures.	- Progress bar on every other page - Humanities focused; contains a specific section on handling cultural assets (e.g., digital photos, scans of manuscripts, etc.)	- Level: Beginner - Delivery Mode: Self-paced; review of modules - European focused, so may have some information not relevant for users not in the region	
Managing Qualitative Social Science Data: An interactive online course ➔ Social Science Research Council (SSRC) & Qualitative Data Repository (No Date)	This online course provides education on managing qualitative social science data throughout its lifecycle.	- Provides examples of qualitative work throughout each module - Multiple exercises for each module - Specific to qualitative work in the social sciences	- Level: Intermediate - Delivery Mode: Self-paced; review of modules with self-guided exercises - Course can be taken as a whole or each lesson can be a stand-alone resource - Lessons are long webpages that require scrolling	
MANTRA ➔ University of Edinburgh (2025)	This series of interactive online units explains terminology, key concepts, and best practice in research data management.	- Accessibility options to change background color and background images - Easy to navigate with arrow buttons - Click on your role (e.g., research student, career researcher, senior academic, and information professional) to see guides for recommended training	- Level: Beginner - Delivery Mode: Self-paced; review of training modules that include videos and activities - Designed for post-graduate students, early career researchers and information professionals	
New England Collaborative Data Management Curriculum (NECDMC) ➔ University of Massachusetts Medical School (No Date)	Seven online modules align with the National Science Foundation’s data management plan recommendations and addresses universal data management challenges.	Provides both information and lesson plans so that the material can be used to teach others	- Level: Intermediate - Delivery Mode: Self-paced; review of powerpoint slides - Requires downloading files with a lot of content - Designed for undergraduates, graduate students and researchers in the health sciences, sciences and engineering	
Qualtrics Trainings ➔ Qualtrics, XM Basecamp (No Date)	This website houses more than 20 videos related to REDCap use for data collection and management made by the creators of Qualtrics.	- As the creators of Qualtrics, XM Basecamp is the absolute authority on Qualtrics functionality - Recommended by BRISP survey respondents as a trusted source for REDCap training	- Level: Beginner-Intermediate-Expert - Delivery Mode: Self-paced; Video, written materials - Login required - Not all resources may be free	
REDCap Training Series ➔ University of Washington Institute of Translational Health Sciences (ITHS) (2023+)	The ITHS REDCap training curriculum has been divided into three skill levels to cover critical topics related to the use of REDCap for data collection and management.	Recommended by BRISP survey, respondents as a trusted source for REDCap training	- Level: Beginner-Intermediate-Expert - Delivery Mode: Self-paced; Video, written materials - Presentation recordings are not publically available	
REDCap Training Resources and Videos From the Colorado Clinical and Translational Sciences Institute ➔ University of Colorado Colorado Clinical & Translational Sciences Institute (2025)	These videos and additional resources provide an excellent overview of REDCap functionality and best practices.	- Includes links to other great resources and an FAQ section that covers frequently asked REDCap questions - Resources are arranged by topic - Recommended by BRISP survey respondents as a trusted source for REDCap training	- Level: Beginner-Intermediate-Expert - Delivery Mode: Youtube videos - Some of the videos are older, but still useful	
REDCap Training Videos ➔ Vanderbilt University, Project REDCap (No Date)	More than 20 instructional videos explain how to use REDCap use for data collection and management.	- As the creators of REDCap, Vanderbilt is the absolute authority on REDCap functionality - Recommended by BRISP survey respondents as a trusted source for REDCap training	- Level: Beginner - Delivery Mode: Video - Videos may not go into the depth needed for your projects	
Research Data Management ➔ UK Data Service (No Date)	This toolkit has clickable links that help explain the research data management process.	- Clear, clean website design - Large text is easy to read - The majority of information is on one webpage, which may make it more accessible to those who use text readers since they don't have to click to multiple web pages	- Level: Intermediate - Delivery Mode: Self-paced; review of library guide - The information provided is broad, not deep	
Research Data Management (Health Sciences) ➔ University of Michigan Library(2025)	This library guide provides tips for managing data and creating a data management / sharing plan.	Thorough overview and resource list for creating data management and sharing plans, which are a critical requirement for NIH grants	- Level: Beginner-Intermediate-Expert - Delivery Mode: Self-paced; review of library guide and videos - Some information and resources presented are locked behind U-M login or are U-M specific - Includes a robust description of the research data management lifecycle with tips at each stage and links out to further reading/resources.	
USGS Data Management Training Modules ➔ U.S. Geological Survey (2015)	Six interactive modules help researchers, data stewards, managers and the public gain an understanding of the value of data management in science and provide best practices to perform good data management within their organization.	- Automated modules, can be read out loud and have closed captions - Modules have a built-in outline and search function to look for keywords - Easy-to-read slides have notes for more context and clickable buttons to access additional resources and glossary	- Level: Beginner - Delivery Mode: Self-paced; review of training modules and/or powerpoint slides - Some examples have more of a USGS slant to them but they're still easy to follow	

Acknowledgements

This resource relied on the outstanding expertise of our survey and focus group participants, and the efforts of Lukonde Mulenga, Angela Lyden, Reema Kadri, and Dr. Claire Kalpakjian. A special thank-you to our early reviewers Sue Burhop (Program Lead, [retired]), Johanna Carroll (CTSO Training and Education Administrative Assistant), and Jennifer Miner (Research Area Specialist Lead)
